ABSTRACTER INITIALS

Avera McKennan Hospital
Patient: MYERS RICHARD DALE
DOB: [REDACTED] M/25
Acct: [REDACTED] MR: [REDACTED]
Adm: 01/16/19 Dsch: 01/16/19
Loc: MK.ED Rm: Status: DEP ER
Attending:

VITAL SIGNS: Full arrest. Please refer to EMR.

GENERAL: This is a cold 25-year-old male patient in full arrest.

SKIN: Cold. Scattered bruising.

HEENT: Head demonstrates a frontal bruise that appears nonacute, but this is unclear. Pupils are 4 mm and fixed. I gel is currently in place with dark oral secretions.

CARDIOVASCULAR: Initially, patient is in fine V. fib. He is refractory to multiple shocks and medications. Eventually patient goes into asystole.

LUNGS: Coarse crackles bilaterally. On reexamination several hours later, crackles are softer.

ABDOMEN: Soft, mildly distended until decompressed with OG.

EXTREMITIES: Cold, with scattered bruising.

NEURO: Patient has a GCS = 3. No further testing able to be performed. Patient apparently had some minimal signs of life prior to EMS contact, and he "moved an arm" at the time. No signs of life since arrival to the ED.

VASCULAR: No palpable pulses, unless CPR.

PSYCH: Unable to obtain.

OPERATIVE REPORT

DATE OF SERVICE:
01/16/2019

PREOPERATIVE DIAGNOSIS:
Found down, being coded with severe hypothermia.

POSTOPERATIVE DIAGNOSIS:
Found down, being coded with severe hypothermia.

PROCEDURE:
Right common femoral vein central access with a Zoe catheter for rewarming.

DESCRIPTION OF PROCEDURE:
Patient's right groin was prepped and draped. Needle was inserted in the common vein. Wire was passed. The warming catheter is placed to the hub and sutured in place and flushed. He tolerated the procedure well.
